

We modify timber – and we enhance it

Our precision-controlled heat tempering process transforms wood into a superior, high performance material. By refining its structure at a cellular level, we enhance durability, stability, and resistance to external elements. This means fewer defects, less maintenance, and a longer lifespan, ensuring our timber meets the demands of modern construction and design.

Heat Tempered, Nature Perfected.

The heat tempering process at Imbue enhances the wood's natural beauty while strengthening its core. By carefully controlling temperature and humidity, we unlock the full potential of timber, increasing its stability and resistance to environmental factors. Our advanced modification process is free from harsh chemicals, preserving the integrity of the wood while delivering superior performance.

Rapidly Renewable.

Responsibly Grown. Real Impact.

Sustainability is at the heart of Imbue. By focusing on a fast growing, responsibly sourced New Zealand Radiata and FSC® certified forestry, we ensure a renewable supply chain without compromising quality.

Why Choose Imbue Cladding

Imbue Cladding is precision heat tempered, designed for durability, stability, and lasting appeal. FSC® certified and responsibly sourced, it delivers high performance flatsawn timber without compromise.

Available in vertical shiplap, T&G secret fixed and other adaptable profiles, with a variety of finishes and coatings, it lets you shape the look and feel of any project. It's also a more sustainable choice with each board storing more carbon than it takes to make.

Key Features:

- Heat tempered for durability, stability, and long-term performance.
- 96.5% dimensional stability.
- Durability Class 1 (EN350) and Class 2 (AS5604) – above ground.
- Available optionally H3 treated (AS1604) for termite zones.
- High grade quality timber with mainly clear faces and minimal knots.
- 15-year warranty.*
- Stores more carbon than it uses in production, 7.56kg + of carbon.
- Versatile and compatible with a wide range of colours.
- Profiles and finishes that adapt to your design vision.
- FSC® certified timber from responsibly managed plantations.
- Light weight and easy to install.

*Terms and conditions apply.
